## Project2 Report

## 1 Part 1

a).

if the number of packets in the system less than B, then the packet loss won't happens.

for markov chain, the maximum packet in the system is B, hence,

$$\lambda \pi_0 = \mu \pi_1 \tag{1.1}$$

$$\lambda \pi_1 = \mu \pi_2 \tag{1.2}$$

$$\dots$$
 (1.3)

$$\lambda \pi_B = \mu \pi_{B+1} \tag{1.4}$$

(1.5)

therefore,

$$1 = \sum_{i=0}^{B} \pi_i \tag{1.6}$$

$$1 = \sum_{i=0}^{B} \pi_0(\frac{\lambda^i}{\mu}) \tag{1.7}$$

$$\pi_0 = \frac{1 - \frac{\lambda}{\mu}}{1 - \frac{\lambda}{\mu}^{B+1}} \tag{1.8}$$

$$\pi_B = \frac{\frac{\lambda}{\mu}^B (1 - \frac{\lambda}{\mu})}{1 - \frac{\lambda}{\mu}^{B+1}} \tag{1.9}$$

$$=1 - \frac{1 - \frac{\lambda}{\mu}^{B}}{1 - \frac{\lambda}{\mu}^{B+1}} \tag{1.10}$$

hence, the loss rate is

$$P_d = 1 - \frac{1 - \frac{\lambda}{\mu}^B}{1 - \frac{\lambda}{\mu}^{B+1}} \tag{1.11}$$

b).simulation code

```
\# This is a simpy based simulation of a M/M/1 queue system
# Now the buffer packet size is limited to B
